 TITLE Nucleotide sequence of beet necrotic yellow vein virus RNA-1  
 JOURNAL J. Gen. Virol. 68, 615-626 (1987)  
 COMMENT [WARNING] On Feb 25, 2002 this sequence was replaced by a newer version [gi:60642](#).  
 Beet necrotic yellow vein virus (BNYVV) is a multicomponent soil-borne rod-shaped virus responsible for a severe disease of sugarbeet called rhizomania. BNYVV contains four single-stranded 5'-capped and 3'-polyadenylated plus-sense RNA molecules. In [1], they report the complete sequence for RNA-1, thus completing the molecular description of the BNYVV genome. Base sequences of the other three genome RNAs have already been published by the same authors.
